PROFESSIONAL SUMMARY

Frontend engineer with close to 3 years of experience building React.js and Next.js applications in TypeScript. For the past two years I have been the sole frontend developer on a travel booking platform spanning flights, hotels, and trains, owning the full path from REST API and GDS integration through multi-step booking flows, authentication, and the final UI. My work centers on frontend architecture, reusable component design, responsive design, and performance optimization, using React Query for data fetching and Tailwind CSS for styling within a small Agile team. I am currently expanding into backend development, building REST APIs with Node.js and Express and working with PostgreSQL, SQL, and Prisma ORM to grow toward full stack development.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, SQL, HTML5, CSS3

Frontend: React.js, Next.js, Tailwind CSS, Material UI, Framer Motion, Responsive Design, Component-Driven Development

State Management: React Query, Context API

API & Networking: REST APIs, API Integration, Axios, Postman

Performance: Lazy Loading, Code Splitting, Memoization, Reusable Components

Authentication: Login Flows, Protected Routes, JWT, Token Handling, Session Management

Backend (currently building): Node.js, Express.js, REST API Development, CRUD Operations, API Architecture

Database & ORM (currently learning): PostgreSQL, SQL, Prisma ORM, Database Design, Relationships, Migrations

Developer Tools: Git, GitHub, VS Code, Jira, Figma

Methodologies: Agile, Scrum

PROFESSIONAL EXPERIENCE

Frontend Software Engineer, Enspirit Technologies

Somajiguda, Hyderabad, Telangana, India

Sep 2023 – Present

- Sole frontend developer on a travel booking platform covering all three verticals (flights, hotels, and trains), collaborating cross-functionally with four backend engineers and a full-stack developer on a team of around 9 to 11.
- Built booking flows end to end across every vertical search, results with filtering, passenger and guest detail forms, fare rules, and checkout through component-driven development and a maintainable, scalable UI.
- Integrated third-party travel and GDS RESTful services for search and booking, using React Query for data fetching, caching, and background refetching, with Axios and Context API for shared state.
- Set up the full frontend authentication flow, including login, protected routes, token handling, and session management.
- Improved load time on the heavy search-results and booking screens by roughly 20 to 30 percent through lazy loading, code splitting, and memoization.
- Built responsive, accessible interfaces with Tailwind CSS and Material UI, following WCAG practices across desktop and mobile browsers.
- Owned features across the software development lifecycle, from sprint planning through release, working closely with backend and product teams and taking part in code reviews to maintain code quality.
- Mentored two junior developers on the codebase and reviewed their work through frontend-backend collaboration.

PROJECTS

Resume Builder Application — personal project

React.js, TypeScript, Tailwind CSS

- Built a resume builder with live preview and PDF export, using several templates that share one common component structure so a change in one place flows through all of them.

E-commerce Admin Dashboard — personal project

Next.js, TypeScript, Material UI

- Built an admin dashboard for products, orders, and users with full CRUD, plus pagination, search, sorting, and form validation, using reusable table components and cached API data.

EDUCATION

Bachelor of Engineering, Electrical and Electronics Engineering

Vidya Jyothi Institute of Technology, Hyderabad, Telangana | Aug 2019 – May 2023 | CGPA: 8.0/10
